

Public Notice of Watermain Flushing

The City will be flushing watermains in the area shown on the map below beginning the week of March 5, 2018. One third of the City's watermains are flushed each year to minimize sediment deposits in the water system that can deteriorate our water quality.

Flushing may cause pressure fluctuations, some discolouration and sediment in the water reaching your home or business. All of these conditions should be of short duration. If your water appears discoloured, run a cold water tap until the water clears. Please direct inquiries to Public Works at 604.927.5496 or email publicworks@portcoquitlam.ca.
